Accessibility Panel

Our project is to create accessibility panel designed for universal use. This is a platform to set accessibility configurations for your website.

Getting Started

To integrate the accessibility panel in your project, add accessibility.ftl to your screens.
Link all javascript files to your footer and add links to the style files to your header.

Implementation

In addition to this, you will have to add the following javascript code to your footer or to all those ftl pages where you want to implement the accessibility settings.

```
<script type="text/javascript">
   $(document).ready(function() {

       // accessibility - add tabIndex to p, h*, label, span tags dynamically if allText option is selected
        setTabIndexToSpeakAllText();

 });
</script>
```

JS Files

Slider.js contains the javascript functions for the accessibility page

spelscreenreader.js has implemented bespeak function that gets called on key press or performing the configured action.

Built With

Apache offbiz.

Contributing

Feel free to use our code and contribute to the accessibility panel.
